

IN THE SPECIFICATION:

Amend the title on page 1 and page 29 to:

Network-Based Input System and Method in Which Candidate Characters Submitted by a User are Recognized and Recognized Characters are Returned to the User

Amend the abstract on page 29 as follows:

~~The present invention provides~~ An input method, system and apparatus based on a network and an input system thereof, in which an user selects a desired language and desired input method(s) by downloading an applet from a server ~~according to the invention,~~ and sends the input characters ~~to the invention~~ to be recognized, and then the server sends the recognized results back to the user.
